Tutor biography

Lee de-Wit teaches neuroscience and political psychology at University College London. He has a background in experimental psychology and neuroscience. He studied at the University of Bristol, and Durham University, and has worked at the University of Leuven, the University of Cambridge and University of Oxford. His current research focuses on individual differences in beliefs and cognitive biases underpinning differences in attitudes towards immigration and capitalism.

Course syllabus

Aims:

This course aims to provide an insight into how human psychology can shape political decision making. More specifically it aims to explore how individual differences (in personality, beliefs, moral values, genetics, brain structure and activity), can help us to understand political differences. It also aims to provide an insight into some of the key cognitive (confirmation bias, cognitive dissonance, etc.) and perceptual (voice preferences, first impressions of faces) biases that play a role in political decision making.

Content:

The day will focus on empirical research in political psychology. In particular focusing on the individual differences (in moral values, personality profiles, cognitive biases etc.), between people with different political leanings, and the psychological mechanisms that can help us to understand political decision making (cognitive dissonance, confirmation bias, cognitive heuristics etc.). It will also explore the biological basis of political decision making, and introduce students to some of the key neuroscience methods and findings in political psychology. Finally it will explore voter turnout, and how behavioural insights might be used to influence whether people turn out and vote.

The topics covered will include:

- Moral Foundation Theory
- Personality Psychology
- Evolutionary and cross cultural psychology
- Emotional biases in political decision making
- Neuroscience and genetics in political decision making
- Perceptual process in political decision making
- Behavioural insights in changing voter behaviour

Presentation of the course:

The course will involve 4 lectures, with time for questions and discussion.

As a result of the course, within the constraints of the time available, students should be able to:

- understand how empirical scientific methods can be applied to complex voting behaviour
- understand some of the key psychological mechanisms that influence how we vote
- understand some of the key individual differences that shape people’s voting decisions
- understand how psychological insights might be applied to change voting behaviour
Reading and resources list

Listed below are texts that might be of interest should you wish to supplement your learning on the course. Any essential reading is marked with an asterisk *
