Tutor biography

Dr Sarah Kuppen is a child psychologist, working as a senior lecturer in Developmental Psychology at Anglia Ruskin University. Sarah has an MSc in Experimental Psychology from Oxford University and a PhD from Cambridge University (developmental reading disability). Sarah is an active member of the Developmental Section of the British Psychological Society and regularly gives invited talks on both her experimental research and popular parenting topics in addition to reviewing and publishing in the peer reviewed academic press. She is also mom to two boys.

Recently, Sarah has become interested in how science can be applied to the practical issues of parenting young children. She has recently written a book for parents, which will be published in May next year. The book provides practical tips and also solves more than 50 familiar parent questions and dilemmas, using the latest developmental research.

Course syllabus

Aims:

This short course aims to:
1. Provide parents and carers of young children with the tools to better understand early child development
2. Increase knowledge of practical techniques for effective parenting
3. Disseminate best practice on how to evaluate research claims related to parenting topics

Content:

Parenting a young child can be a challenging job. This day course aims to make the journey easier, introducing some practical science-led tips presented on a solid foundation of developmental psychology. Working alongside an increased range of practical techniques, this course aims to provide an increased understanding of children’s developing abilities, ultimately allowing more effective parenting.

In addition to answering questions such as; Does time-out really work? Is too much screen time harmful for my child? How and when is sleep training effective? Should I raise my child as a bilingual? The course will present a parent-focused guide to a child’s early cognitive and social/emotional development.

Presentation of the course:
Lecture style presentation, group work and class discussion.

As a result of the course, within the constraints of the time available, students should be able to:

Parents and carers should feel an increased level of knowledge in relation to child development norms, milestones and processes of development.

Attendees should also feel better equipped to deal with difficult parenting situations and decisions.

Additionally, the course should provide the knowledge with which to evaluate media claims on emotive parenting topics.
Reading and resources list

Listed below are a number of texts that might be of interest for future reference, but do not need to be bought (or consulted) for the course.
